

Project:
Lexus
Building Type: Office / Showroom

The newly opened Lexus showroom in Auckland is Giltrap Groups' latest stand-alone luxury car showpiece, incorporating leading edge green technology and innovations that support the sustainable and environmental values and practices of the Franchise and Company.

Objective

The objective was to provide a bright, attractive and uncluttered environment for staff and customers with optimum light conditions for display of new Lexus cars. An important consideration in the lighting design was how to introduce controlled quality daylight illumination to the more enclosed areas of offices, reception and customer lounge, balancing them as far as possible with the daylight in the showroom. By increasing natural light it was also intended to reduce dependence on artificial light throughout the facility.

Solution

When looking for a suitable daylight solution for the office, reception and lounge areas, the Giltrap Group approached HomeTech Solatube regarding the possible use of Solatube Daylighting Systems. An initial meeting to view the system first hand in the Auckland showroom resulted in working in with RTA Studio to design a daylighting solution. That solution optimised the use of daylight throughout the interior spaces of the complex which could not take advantage of the perimeter daylight entry to the building. The Solatube 330 DS-CC SolaMaster Daylighting System selected included the Daylight™ Dimmer control where, at the flick of a switch, individuals can control the level of light to their specific requirements.

Products Used

- 8 x Solatube 330DS-CC SolaMaster Daylighting Systems complete with integrated Daylight™ Dimmer controls installed to the individual office areas, reception and customer lounge.

Testimonial

"We are very pleased with the outcome of our lighting design. The showroom was opened in winter, yet the natural light the Solatube Daylighting System brings in has significantly reduced the need for artificial light even on dull days. Staff enjoy working in a more naturally lit environment. The Solatube Daylighting Systems have attracted considerable attention and are a frequent talking point among staff and visitors.

Early indications are that the use of Solatube Daylighting Systems will deliver significant cost savings in tandem with our specification of low wattage electric lighting controlled by daylight sensors in the showroom."
